REDCLIFF REVIEW

OUR SLOGAN: An Industrial Metropolis of Industrious People Who Pull Together.

COMING MONDAY
"Catherine The Great"
Truly A Great Show

Volume 23 THE REDCLIFF REVIEW THURSDAY, AUG. 2ND. 1934 Number 40

Alberta Telephone Department is In Bad Shape

Writing off Ten Million Dollars Is Recommended

Alberta's general debt should be increased by $10,020,000 thro having this amount written off the balance sheet of the provincial telephone system.

A reserve fund should be built up to 20% of the physical value of the system.

Rural lines which have been the cause of the system getting into the sorry mess now apparent should be sold to "local" non profit connecting companies.

These are the recommendations of Harry Barker, New York engineering expert, who was commissioned by the provincial government last winter to make a survey of the telephone system. He submitted an interim report shortly before the legislature closed and his final report amplifying the first one, was received Monday by Hon. George Hoadley, minister of telephones.

Ranchers Advised to Hold Unfinished Cattle

Would Hardly Pay The Cost of Marketing

Warning that the market for unfinished cattle was poor at the present time and advice to growers to hold back their cattle if they had sufficient feed was given by D. A. MacKenzie, Dominion livestock market representative, Monday.

Reports that there was a heavy run of this type of cattle were exaggerated, Mr. MacKenzie said. It would be no greater than in other years, he said, though the condition was aggravated by low prices. Some of the stock would hardly pay costs of marketing, he reported.

SUGGESTED CHANGES IN RELIEF FUNDS

What amount each province will get from the federal government for relief has not yet been decided upon.

Premier Bennett's proposition is that each province be paid a lump sum for this purpose instead of their percentage of the cost as in the past. This suggestion is being carefully considered by the provincial representatives who are devided in their opinions as to how it will work.

If accepted the proposition will place more responsibility on the provinces and will, no doubt, make them more careful in the handling of their allotment.

EMPLOYMENT IMPROVING

Marked improvement in employment statistics was shown in the report issued by Hon. H. H. Stevens, minister of trade and commerce. Employers reporting had 945,165 persons at work July 1st, compared with 899,751 June 1st.

"The situation generally was better than on the same date of 1933 and 1932." said Mr. Stevens

Local Girls Badly Trim The New Club

Win Out in League Game By 35 Runs to 5

After being badly beaten to the tune of 23 to 3 by Safeway girls last Thursday, the local girls turned around and gave the New Club aggregation an even worse trimming last Monday evening. Before our score card and pencil played out at the game Monday the local lasses had piled up a score of 35 while the visitors tallied but five.

These were two of the most peculiar games played this season. In both instances it was simply a case of the winners being right on their toes all the time and the losers having an evening off.

If Redcliff had played on Thursday the way they played Monday they would have given Safeways a run for their marbles.

The standing of the teams is the same as it has been practically all season— Safeways at the top and Redcliff next.

Redcliff Reminiscences

Taken From the Review File of August 8th, 1915

The rolling mills here are turning out about 15 tons of iron a day.

* * *

One year ago last Wednesday Britain and Canada entered the Great War.

* * *

John Bradley, 24 years old, has paid the supreme sacrifice at the front.

* * *

A farewell for the Redcliff boys of the 63rd will be held here tonight in the Empress theatre.

* * *

D. Broadfoot has commenced work on the erection of his grain elevator here.

* * *

Mr. and Mrs. C. T. Hall returned from a trip to Ontario, last evening. C. T. says there is plenty of evidence in the east that war is on in earnest, but the crops aren't any better there than they are right here.

ADDITIONAL LOCAL ITEMS

Mr. Bob Moore left on Sunday by car for a fortnight's vacation at Banff.

* * *

Mrs. H. Leppard and family are spending a few weeks holiday at Elkwater Lake.

* * *

Miss Elinor Learmonth and Masters Jack Learmonth and George Ballantyne are camping at Elkwater Lake this week.

* * *

Mrs. Hawthorne and Miss Hilda of Medicine Hat were guests of Mr. and Mrs. Frank Broughton on Monday.

* * *

Miss Mary Maskell was a tea-hour hostess on Wednesday in honor of Miss Maisee Hill, an August bride elect.

* * *

Mrs. C. J. Wilson, of Vancouver, who has been visiting her father, Mr. Wm. Henderson S., for the past three weeks, returned to her home last Thursday.

* * *

Miss Nanny Learmonth of Calgary arrived home on Monday to spend a short holiday with her parents, Mr. and Mrs. A. J. Lermonth.

* * *

Mr. and Mrs. Worts and Cyril with Mr. and Mrs. Sanderson are leaving this week for two weeks holiday at Elkwater. The Misses Mary Maskell and Thelma will be accompanied by Edith Collard.

* * *

Mr. and Mrs. Standing, who have been touring through the west, passed through town last week-end on their way to their home in Brandon. While here they were the guests of Mrs. Fairbairn.

* * *

Mrs. McLachlan was the hostess at an enjoyable whist drive under the auspices of Vega Lodge on Tuesday evening. The first prize was won by Mrs. Tanner and the consolation by Mrs. Allanbach. Delicious refreshments were served and a pleasant social hour spent by those present.

Mr. and Mrs. Ted Van Wart and Mr. and Mrs. W. Swanson spent last week in Banff.

Churches

GORDON MEMORIAL UNITED CHURCH

Pastor: Rev. R. Erskine Pow

Sunday, July 29th.

10 a. m. Church School.

11:15 Morning Service.

James Brown will conduct the service.

3 p. m. Service at Bowell.

No evening service.

"It is God's presence that makes the world sublime and beautiful."

ST. MARY'S CHURCH

Celebration of Mass every Sunday of each month except first Sunday, at 8:30 a. m.

ST. AMBROSE CHURCH

Rev. H. S. Hamnett, Vicar.

Aug. 5th. 10th Sunday after Trinity.

No 8 o'clock celebration.

Mattins 11 a. m.

Evensong 7:30

Mr. Fred Stickles of the Dominion Glass Office staff, is away on his vacation at present.

* * *

Mr. Hoogveld of Calgary arrived in town this week to take a position at the Dominion Glass Co. plant here.

* * *

Carl Madsen was taken to the Medicine Hat hospital on Tuesday night to undergo an operation for appendicitis.

* * *

Mrs. T. Floyd and son, David, who have been holidaying at Calgary, returned home last Sunday.

* * *

The excessive heat and hot winds at the beginning of this week have greatly changed the crop outlook in many parts of the province. Around here all crops are badly in need of rain.

Marie Dressler, popular movie actress, passed peacefully away last Saturday after a lengthy illness.

U. S. May Have to Buy Canadian Wheat

Production in U. S. Has Had a Serious Blow

"I believe that in the not distant future United States will be buying Canadian wheat in large quantities to meet domestic consumption," said E. C. De Clerque of Chicago, vice-president of Henry De Clerque Incorporated, representatives of the Southam Newspapers in the United States, in an interview, Monday.

"We are not only increasing our own consumption but production of wheat in United States has had a terrible blow from drouth." said Mr. De Clerque. "It is doubtful in many minds if the middle western States will ever regain their former status as a grain raising centre," he said

BAD FOREST FIRES IN BRITISH COLUMBIA

Cooler weather, scattered showers and a moderation of the strong wind that had fanned forest fires in the Kootenay and Boundary districts of Southern British Columbia into a raging inferno during the past three days combined today to assist more than 1000 fire fighters.

The majority of the fires were reported under control.

The situation in East Kootenay was considerably relieved, but a fire covering approximately 30 square miles near Canal Flats was being watched closely.

JUST FOR FUN

Prices Soar as New Crop Year Opens

Government Agencies Selling On Every Bulge

A new crop year was opened on the Winnipeg Grain Exchange yesterday, a year that began with new "highs" marked up in the current life of each wheat future, as prices soared to close with gains of 1½-1⅝ cents, October option at 88⅜ December 90⅛-¼, and May 94⅝ cents.

Gaynor-Farrell Together Again

Picture "Change of Heart" Unites Old Stars

After 18 months of separation Janet Gaynor and Chas. Farrell the screen's most romantic team will be reunited in Fox Film's latest release, "Change of Heart," which comes to the Monarch Theatre, on Monday Aug. 1st the 6th.

The screen play adapted from the novel is a modern drama of youth's epic struggle for love and happiness in the turmoil of Manhattan. The film relates a big city's grim challenge to four youngsters just out of college, two boys and two girls who, banded together by ties of loyalty and common interest, enter its portals, accept its challenge and begin their brave fight to achieve success, realize their dreams of ambition and possibly fame.

TWENTY YEARS AGO

Twenty years ago last Saturday Count Leopold Von Berchtold signed his name to a 70 word manifesto—theGreat War was on!

That document, penned at Vienna where army officers are again pouring over their war maps was an open telegram from the Austro-Hungarian minister of foreign affairs to the Serbians.

One of the shortest, mightiest messages of history, it launched a hurricane of hatred which enveloped the world in a tidal wave of blood. It embroiled 27 nations, sacrificed more than 8,000,000,000 lives.

Two score years ago last Saturday, however, no such Armageddon was dreamed of, far less expected.

Serbian hatred for Austrians had vented itself in the assassination of Archduke Ferdinand, heir to the Austro-Hungarian throne, and his wife. Austria long had wanted to control the Balkans.

Mr. O. Wooding returned to town after a fortnight's holiday at Elkwater Lake.

DOG NOTICE

In future all dogs must be kept under control at all times. All owners of dogs of any age are compelled to secure tags for same within one month of ownership. This bylaw will be strictly enforced in future.

J. Kitchen. Police.

Conditions in Austria Are Very Serious

The Assassin of Dollfus, Was Hanged Last Tuesday

Conditions in Europe are in a threatening condition as a result of the assassination of Chancellor Dollfus of Austria, last Wdnesday. Otta Planetta, the assassin, was a Nazi sympathizer. This leads European papers to believe that the murder of Dollfus was a deliberate plot to upset his government, which was aided and abetted by the German authorities.

Planetta, the assassin, and Holzweber, the leader of the putsch were both hanged on Tuesday, after a courtmartial of high treason.

Kurt Schuschnigg has been made chancellor to succeed Dollfus, and Prince Von Starhemberg as military leader. The new government will carry on along the same lines as did Dollfus and will maintain the independence of Austria.

Although the Nazis attack—ment for the murder of Dollfus— was a failure, and the revolution is now fairly well under control, conditions are still very precarious with possibilities of further national and international complications.

Italy and Jugoslavia have amassed troops on their boundaries bordering on Austria and are prepared to make war on any outside interference with Austria's plans for maintaining her independence.

In the meantime the revolutionary Nazis are attempting to carry on a campaign of terror. The outcome is being closely watched by all European nations and at the moment it is hard to predict what the final outcome will be.

Picture Which Lured Dillinger to His Death

At Monarch Theatre Medicine Hat, This Week End

"Manhattan Melodrama" sensational underworld film is the movie that lured "Dillinger" to Biograph Theatre in Chicago, where he was shot down by federal agents.

Clark Gable, Wm. Powell and Myrna Loy are starred in Metro Goldwyn- Mayer's "Manhattan Melodrama," current feature at the Monarch Theatre. It is their first appearance as a star-ring trio, and the first time Gable and Powell have appeared in the same picture. The story is a fast- moving melodrama of New York life, with Gable as a big-shot gambler, powerful and dramatic figure in the city's demi world. Powell, as the district attorney, his life- long friend, is called upon to prosecute him for murder. The picture is said to be one of the year's outstanding screen achievements.

Miss Lena Willis of Hazelmore, Sask. passed through here last Sunday on her way to Lethbridge. She spent the day with her cousins Messrs. Wm and Norman Willis and families

Fine Quality Gives Satisfaction

"SALADA" TEA 642

"Fresh from the Gardens"

Economic News In Fashion

Periodically, organizations throughout the country pass resolutions decrying the treatment of certain news by the public press, but, as a rule, these are ill-advised (however fine the motive behind them) for the simple reason that the press itself is the finest barometer of public opinion. Newspapers could not survive did they not interpret aright the desires of the public to which they cater; they could not exist as profit-making institutions, were it not for the fact they keep a wary finger on the flickering pulse of the fickle reading public they serve. The success of a daily newspaper depends upon its ability to give the public what it wants. That is why circulation has become the criterion of success in the newspaper field.

The "wants" of the reading public vary from time to time, and policies of the newspapers must vary with them. Hence, news fashions change, as fashions in clothing change; and it is extremely diverting to study the changes as they appear in the columns of the daily press.

A week or two ago, H. R. Knickerbocker, well-known European correspondent of the Hearst organization, arrived in England to write a series of articles for Hearst newspapers on the economic recovery of Great Britain. In the course of an interview, he said:

"One of the most remarkable things that has happened to the American Press since the depression started has been the public demand for economic news. Before 1929, nobody cared much, but when the slump hit America, it produced some peculiar results.

"Economic news now is considered as important as the latest sensational murder story. Whether the readers understand it or not, I don't know, but Americans have acquired a sudden curiosity to know what is happening to the rest of the world. Consequently, newspapers make a regular feature of analyses of world economic news."

Students of newspaper trends had been struck with this popularization of economic news in the United States, particularly through the writings of Walter Lippman, perhaps the most famous of all the commentators of economic events. In Canada, during the same period, a similar tendency has been remarked, the manifestations of which, perhaps, have been more abundant for reasons which are not far to seek.

Recent provincial elections in British Columbia and Saskatchewan especially, have demonstrated clearly that the public is more eager to absorb information on economic matters, more desirous of listening to economic discussion from the public platform, than ever before.

This is primarily due to the fact realization of their dependence upon world markets has been brought home to the people of the prairie west with more directness than heretofore. They have become acutely aware of the fact that anything affecting the economic condition of the English textile worker, the French vineyard laborer, the coal-miner of Scotland or Wales, sooner or later, is reflected in their own economic condition. They know now that anything which affects the purchasing power of German, Austrian, Jap or Chinese wage-earner, must eventually have its reflex here.

World economic news, therefore, has assumed new and more impressive proportions in the eyes of the Canadian people. The vital importance of a healthy world economy has become all too obvious. Consequently, when news turns bullish, when word comes that Britain is shuffling off the coils of long internal depression, the items partake of something more than the evanescent interest of the murder mystery or the sordid sex drama.

New political movements, too, have had their genesis in economic discontent; hence it is only natural that economic discussion should attract an ever widening public. The one drawback to the new fashion lies in the fact that economics, so far, has not been reduced to an exact science, whose truisms can be set forth with the precision of mathematical formulae. For that reason, it is essential that commitment to any specific theory should follow, not precede, complete study of economics, not as it has been advanced by some proponent of a particular doctrine, but as it has been advanced throughout economic history. The truth cannot be determined by study of one set of theories, but by analysis of all theories so far advanced from times preceding Adam Smith to those of latter-day Socialists. Such analysis should be made with due regard to practicability, as demonstrated in political history; not in the field of statecraft alone, but in the wider field of trade and commerce, particularly during the last century and a half.

Mosquitoes Hate Yellow

Avoid This Color But Adore Navy Blue And Red

If you would be free from mosquitoes, wear yellow. They simply hate it. If, however, you would like to receive the attentions of the little blighters, just wear navy blue, which they dote on. They are keen on dark red, but adore navy blue. Ochre, white and orange are passe and yellow makes them bilious. These findings, states the Canadian National Steamships, have developed from recent studies and the company recommends yellow suits and yellow topees for tropical travel where mosquitoes are liable to abound.

Successful Candidate

Consider the recent campaign in the incomparable state of Kansas, says the New Yorker. One candidate for the state legislature boasted of his honorable discharge from a local madhouse. In every stump speech, he waved the documents triumphantly. "I have papers here to prove I'm not crazy," he would cry. "Can my opponent say the same?" P.S.—He got the job.

Prosperity Village

Small Place In Holland Keeps Reducing Local Taxes

Six times now within the past twelve months have the local taxes been reduced in the village of Liederdorp, near Leiden, in Holland's bulb growing district. It is known as prosperity village. School fees, marriage fees, water and electricity charges have all come down. Only 75 of the 2,700 inhabitants are "on the dole" and they earn their allowance and keep themselves occupied by draining ditches. But no outsider can enter the village free. A turpike man collects a small charge from every stranger who would come inside.

Railway On Liner

A miniature railway is being built inside the new Cunard-White Star liner No. 534, on which more than 2,000 men are working night and day to have her ready for launching on September 26. The railway is being built through the shaft tunnel at the stern and will be used to carry up the massive propeller shafts to the spot where they are to be fitted.

Rents Whole Hotel

Wealthiest Man In World Paying Visit To England

The richest man in the world is shortly to pay a visit to London.

He is not an occidental magnate but a mighty Indian potentate, ruling over a state as large as England. He is His Highness the Nizam of Hyderabad.

This is his first visit to Europe and he will bring over an entourage of 300 people, which includes thirty-five of his wives, who enjoy the title of senior Begums. They will be strictly in purdah, so no white man can look on their faces.

A special liner has been chartered and his envoys in advance are negotiating to take over a whole London luxury hotel.

Nobody knows the extent of the colossal wealth of the Nizam. Fantastic stories are current that the entire vaults of his palace extending for nearly two miles are lined with gold and silver bullion.

He rules over the millions of his subjects with a firm autocratic hand, which has more than once invoked the interference of the Viceroy of India. Shortly after war some point in his administration was not satisfactory to the Vice-regal party and a white political official officer was sent along to Hyderabad to "advise and report." This greatly incensed the Nizam.

Then something apparently went wrong on the Indian money market. Huge wads of Indian bearer bonds were being thrown on to the market and minor panics were starting on the stock exchanges of Bombay and Calcutta.

The government tried to buy the bonds but they still continued piling in. The seller of the bonds was discovered to be the Nizam's broker.

There were hasty consultations between the Viceroy himself and the broker and afterwards with the Nizam. The stock markets ceased being flooded with bearer bonds and His Britannic Majesty's political adviser to the state of Hyderabad was called away to undertake less disturbing duties. That little frolic set the Nizam back about ten million dollars.

His first visit to London is to "render homage" and pay his respects to King George. He will be given a sovereign's honors, such as twenty-one gun salute, a sovereign's escort, guards lining the route from the station to the hotel and one of the King's sons at the station to meet him. In fact, everything will be done on the kingly scale to placate this very important potentate, for he can make himself a bigger nuisance to the "sahibs" than a dozen naked Ghandis.

Rung By Radio Signal

Admiral Byrd Flashed Signal To Liberty Bell July 4

America's foremost historical relic, the liberty bell in Independence Hall, Philadelphia, was rung by a radio signal from Admiral Byrd during the Independence Day broadcast to and from the Antarctic over the WABC-Columbia network, July 4. Special permission to ring the bell was obtained from Mayor J. Hampton Moore of Philadelphia, who spoke during the broadcast. Byrd situated at his lonely advance base 123 miles south of expedition headquarters flashed a signal to Independence Hall. Engineers of WCAU, CBS station in Philadelphia, arranged to "feed" the electrical impulse to a hammer which struck the liberty bell. Its tone was heard not only throughout the United States and Canada, but also in Little America.

Correct English

Should Take Pride In Preservation Of Purity Of Our Language

The person who speaks correctly to-day, or writes what is called "good English", is speaking or writing in the manner of Addison and Pitt and Macauley and Gladstone and other great masters of the language. It is true new words have been created to meet new wants arising out of our evolutionary progress, and there are many technical terms in common use that Pitt wouldn't have understood, but basically our English is their English, and we should take a decent pride in the fact in the preservation of a magnificent asset and the maintenance of a splendid tradition.—Ottawa Journal.

Must Wear Moustache

Budapest is going to have romantic mustachioed policemen. An order has been issued by the chief of police that all mounted policemen must from now on wear moustaches. It is considered not only conducive to military appearance and bearing, but in line with the national tradition of the dashing Magyar horseman.

Colonization Finance Corporation

W. C. McKillican, Former Dean Of Manitoba Agricultural College, Appointed Farm Manager At Indian Head

T. O. F. Herzer, General Manager, of the Colonization Finance Corporation of Canada, Limited, has announced the appointment of W. C. McKillican, former Dean of the Manitoba Agricultural College, as farm manager for the Indian Head zone of the Colonization Finance Corporation succeeding O. S. Longman who has accepted the appointment of Field Crops Commissioner for the province of Alberta. Mr. McKillican is taking up his duties immediately, and brings to his new position of farm manager, a wealth of agricultural training and practical knowledge, and experience of many years as superintendent of the Dominion Experimental farm at Brandon, as well as dean of the Agricultural College.

Mr. McKillican was born on August 23rd, 1882, in Glengarry County, Ontario, of Scotch parentage, and was raised on the farm of his father who was well known in Eastern Ontario as a pioneer breeder of Leicester sheep and Holstein cattle, and leader in agricultural affairs. Mr. McKillican gained his early education in country school and collegiate institute and attended the Ontario Agricultural College from 1901 to 1905, graduating with the degree B.S.A. (University of Toronto). In June, 1905, he joined the staff of the Dominion Department of Agriculture, as representative of the Seed Branch in Alberta and British Columbia where he introduced seed fairs and seed field competitions in Alberta. He started a seed testing laboratory in Calgary and was instrumental in inaugurating the work of the Canadian Seed Growers' Association in Alberta. In March, 1911, he transferred from the Seed Branch to the Experimental Farms and became superintendent of the Brandon Experimental Farm, his work in this position being very prominent. In 1924 he became the first dean of the Faculty of Agriculture of Manitoba University following the inclusion of the Agricultural College in the University.

With the appointment of Mr. McKillican, the Colonization Finance Corporation again has a complete corps of farm managers covering Manitoba and Eastern Saskatchewan, which is under their supervision approximately 1,700 farms totalling approximately 600,000 acres, three-fourths of which are occupied by the owners, subject to mortgage or agreement of sale, only 25% being operated by tenants. At the end of the present month Louis L. Lang, of Galt, Ontario, president of the Colonization Finance Corporation, first vice-president of the Mutual Life Assurance Company of Canada, and head of the Lang Tanning Company of Kitchener, Ontario, is expected to make his second official inspection trip to the west accompanied by a number of directors of the Colonization Finance Corporation who are executors of eastern financial institutions. It is expected that at the end of Mr. Lang's trip some important announcements will be made regarding the expansion and further activities of the Colonization Finance Corporation.

Wager With Death

Two Colorado Convicts In Test To Determine Value Of New Serum

Two Colorado convicts were confident that they had won a wager with death in a series of tests to determine the value of a new serum its discoverers hope will prevent tuberculosis.

The convicts, Carl Erickson and Mike Schmidt, said they have gained weight and are in good health although they have taken several doses of the serum and live tuberculosis bacilli have been injected into their blood.

The life term convicts were told the serum and injections of live bacilli might kill them, but they volunteered to become subjects of experiments after Governor Ed. C. Johnson promised them pardon if they survived.

Russia Imports Wheat

Millions Of Bushels, It Is Claimed, Are Being Sent To Vladivostok

Millions of bushels of wheat, an authoritative source disclosed, are being imported into Vladivostok because of large increase in Russian military manpower in eastern Siberia due to tension between Japan and Russia.

More than 3,000,000 bushels will be imported this year, this source disclosed, almost entirely for the purpose of feeding an increased Russian military establishment.

Despite lack of official statistics from the Soviet union, it was learned that imports at Vladivostok, once an important Russian terminal for Russian wheat exports, gradually have been increasing during the past six years.

New Air Service

Direct air passenger express service between Seattle and British Columbia became effective July 1 when United Air Lines opened operation into Vancouver. Extension of the Pacific coast airway will place the Canadian and Mexican borders only 13½ hours apart.

Agricultural Notes

Many Items Of Interest To The Western Farmer

Sudan grass is being grown more extensively this year for pasture purposes in the St. Lawrence counties of Eastern Ontario.

Commercial canning is one of the oldest of the larger organized industries in the Dominion. The first factory was established at Grimsby, Ontario, in 1878.

Seed cleaning operators in British Columbia state that, owing to the general low viability of the timothy seed cleaned this year, much more seed was blown out in cleaning than in previous years, in order to insure the germination.

A saving of thousands of dollars in preparing grasshopper mixtures in Alberta has been effected by the pulverization of the sawdust used, on the recommendations of the Dominion Seed Branch inspectors, thereby resulting in the use of only 20 per cent. of bran instead of 50 per cent. as formerly.

Under the amended regulations of the Dairy Industries Act, a dairy produce grader may refuse to grade any cheese or butter which in his judgment is of either too high a temperature or too low a temperature to permit proper examination, until the temperature of said cheese or butter is brought within a satisfactory range.

The sale of commercial fertilizers in Saskatchewan has been considerably higher than last year, some 1,400 tons of ammonium sulphate and 100 tons of triple superphosphate having been sold. Most of the fertilizer went into the territory east and north of Regina and north of the Saskatoon-Macklin line. Fertilizer sales in Quebec are estimated at 25 per cent. greater than last year.

Owing to dryness, seed prospects in Quebec, as at May 31, were not promising, especially for timothy and clover. Growers, however, had planned to increase their seed production considerably, and a circular was sent to prospective growers acquainting them with the services available to them from the inspectors of the Seed Branch of the Dominion Department of Agriculture.

By the discovery of the late Sir Ronald Ross of the relationship between the mosquito and the spread of malaria, humanity is in a similar discovery regarding yellow fever, not only saved millions of human lives but enabled millions of acres of potentially fertile land in tropical and sub-tropical parts of the world to be placed under economic crops. Previously these lands were death-traps to all who attempted to cultivate them or live upon them.

During the ten months ended May, 1934, the amount of wheat exported from Canada was 138,828,849 bushels. Of this, 95,765,894 bushels went to Empire countries—Irish Free State, New Zealand, Malta, other dependencies and United Kingdom, the last named alone taking 93,662,051 bushels. The total amount of wheat exported to foreign countries was 43,062,955 bushels. In the order of importance, exported, these countries were Holland, Belgium, France, Germany, Italy, Japan, Norway, Denmark, Sweden, China, Peru, Bolivia, Brazil, the United States, and other small shipments abroad.

Imports of Canadian barley into the Netherlands reached their peak in 1929 when they totalled 142,772 metric tons, or over 41 per cent. of the total. In 1930 the imports fell to 11,881 tons, but in 1931 went up again to 108,630 tons. In 1932 the quantity imported was 77,068, and in 1933 there were no imports of consequence. Since the beginning of 1934 there have been no imports of barley from Canada. Despite its absence from this market for a year and a half, Canadian barley is well liked in Holland and some consumers still ask for it although the price is too high to make business possible, says the Canadian Trade Commissioner in Holland.

Built Fireproof Nest

A pigeon nesting in the courtyard of the federal building at Denver, Colorado, was apparently influenced by ideas of fireproof construction used in the structure. Despite an abundance of twigs and shrubbery it made its nest entirely of wire paper clips. J. M. Lee, janitor, who discovered the nest, reported that there were two eggs in it.

Stitched Heart Works

The medical profession, keenly interested, kept touch by telephone as George Hampton, 41, continued to improve after an operation in a Lancaster, Pa., hospital, in which his heart was lifted from its place, stitched to close a stab wound, and replaced.

Copplestone PAPER PRODUCTS HAMILTON, ONTARIO

New X-Ray Device

Possible For Doctors Miles Away To Examine Patient

A new X-ray observation device, revealing the anatomy of the least substantial body organs and even the blood vessels in their natural color, has been perfected and patented by Luther G. Simjian, former director of the photographic department of the Yale Medical School, it has been announced.

Mr. Simjian's apparatus not only will show the structure and density of bareley opaque parts that appear on present X-ray plates as dim shadowy forms, but lessens existing hazards to the subject being examined. Moreover, by a system of telegraphic wiring between hospitals, it will be possible for a patient to sit before an X-ray tube in one clinic while the image of his internal organs is reproduced for specialists in another clinic hundreds of miles away, or in any number of clinics at the same time.

Superficially, Mr. Simjian's investation resembles the familiar X-ray fluorescent screen which reflects the sharp shadow thrown by the subject as he sits between the source of the rays and the screen. In this shadow, dense objects, such as bones, appear almost black, while tissues of less weight fade into lighter tints of gray. Invariably the diagnostician must indulge in guesswork as he strains to distinguish faint lines of shading.

When the physician desires to peer further into the secrets of a particular organ, such as the heart, he must increase the intensity of the X-rays.

Likes Canadian Way

American Business Man Found Life Tranquil And Enjoyable

A well-to-do American, disliking the way things were going in the United States, sold his business, paid a long visit to Canada and has returned home in a mood to migrate to the Dominion.

He declares that he found life there calm, tranquil, enjoyable.

In Canada he read of no kidnappings.

The people did not grasp their newspapers excitedly every morning, fearful lest the lawmakers had hatched some new and harassing legislative innovation.

The whole atmosphere breathed stability. Few Canadians were affected by the jitters, few talked nervously.—Forbes Magazine.

"Continental Sabbath" refers to the European custom of closing business places on Sunday morning during church hours and then opening them in the afternoon.

DENICOTEA CIGARETTE HOLDER

DENICOTEA Cigarette Holder absorbs the nicotine, pyradine, ammonia and resinous and tarry substances found in tobacco smoke.

Few People Escape Attacks Of Summer Complaint

Summer Complaint may be slight, or it may be serious, but you can't tell when it seizes you how it may end. Allow the profuse diarrhoea, the vomiting and purging to continue, for a day or two, and you may become weak and prostrated.

Just as soon as you feel any looseness of the bowels go at once to your druggist and get a bottle of Dr. Fowler's Extract of Wild Strawberry and check this unnatural action before the weakening looseness can get started.

Don't experiment. Get "Dr. Fowler's". It has been on the market for 88 years.

DR. FOWLER'S EXTRACT OF WILD STRAWBERRY

W. N. U. 2055

Explanation Of Marketing Act, Which Is Designed To Improve Marketing Methods and Practices

At the annual convention of the Canadian Society of Technical Agriculturists, which was also attended by the Canadian Seed Growers' Association, at Macdonald College, Quebec, Dr. Barton, Deputy Minister of Agriculture, Ottawa, gave a lucid explanation of the new marketing act which is in its formative stages and is officially known as the Natural Products Marketing Act, 1934. The preamble of the act reads "An Act to improve the methods and practices of marketing of natural products of Canada and in export trade and to make further provision in connection therewith." The assumption clearly is that the methods followed in marketing are not satisfactory and that undesirable practices obtain. The act is, therefore, intended, said Dr. Barton, to provide legislation by means of which these methods and practices can be changed.

The legislation provides what may be called permissive powers which may, or may not be, exercised. Until they are exercised, the provisions of the Act do not become effective as law. These powers are centred in the governor-in-council, the minister administering the Act, a Dominion Marketing Board, and local boards which may be created under the Act. All powers that may be granted by order-in-council under the Act for the administration of marketing schemes will be vested in the Dominion board. These powers in turn may be delegated to a local board, and the local board will become the administrative body under the general supervision of the Dominion board.

Thus, the local boards, under the supervision of the Dominion board, will enable those who produce and market natural products to constitute control machinery of their own through which they may regulate the movement, direct the sale, without power of buying and selling or of fixing prices, and to determine practices that shall prevail in the marketing of such products. In other words, the local board can control the movement of the product. It may deal directly with only a part of the product or with all of it. The local board may direct shipments in any quantity, through any agency, to any market at any time, or it may withold them, and this direction may have reference to different quality or grades of the product. The local board may also regulate distribution and shipping practices, such as methods of sale, consignment, etc.

Powers of exemption may be delegated to the local boards, also powers of conducting a pool for the equalization of returns received from the sale of the regulated product, and also powers to compensate any person for loss by withholding, by order of the board, any regulated product from the market, or through forwarding any regulated product to a specified market, pursuant to any order of the board. Compensation may also be granted for loss due to depreciation of the currency of the country to which shipments were sent by order of the board. The local board may also be delegated to assist by grant or loan the construction or operation of facilities for preserving, processing, storing, or conditioning the regulated product, and to assist research work relating to the marketing of such product.

Where local boards do not exist, or in cases of emergency, provision is made in the Act for regulating the marketing in inter-provincial or export trade by the Dominion Marketing Board. Another important point is the provision under order-in-council, in prevailing unsettled conditions in trade, to regulate or restrict importation into Canada of any product which enters into competition with a regulated Canadian product. Power is also given in the Act to prosecute persons exploiting or injuring the trade or commerce of the regulated product. This provision is made in the interests of producers, marketers, and consumers alike. For the purpose of administration, for instance, the dissemination of information, all persons engaged in production and marketing are required to register with the board, or, for purposes of giving effect to regulation plains, etc., to obtain a license from the board.

Teacher (during history course)—"What did Montcalm say before fighting the English at the Plains of Abraham in 1759?"

Bright Pupil (answering)—"Who's afraid of the big, bad wolf?"

Prehistoric Lizards

Fossil Remains 66,000,000 Years Old, Found In Manitoba

Two lizards of the undersea that lumbered about the prairies 66,000,000 years ago when water covered central North America were unearthed near Morden, Man., recently. The fossil remains of the prehistoric monsters were found in the Bentonite clay belt several miles west of Morden.

C. M. Sternburg, member of the geological survey of the national museum at Ottawa, who is supervising the excavation of the underwater mammals, stated they were the best example of the mosasaur found in Canada so far.

One fossil is 33 feet long and about 28 feet have been fully uncovered. The other is a little smaller. They were located about eight feet below the surface by J. E. O'Day, representative of a United States firm, who was digging for Bentonite, a commercial clay.

Mr. Sternburg, who has uncovered dinosaurs in Alberta, arrived from the capital a week ago and is highly enthusiastic over the find. It will be shipped to Ottawa.

The mosasaur was a sinuous creature with overlapping scales and V-shaped head, four flippers and a tail half its entire length.

TRADITIONAL "BOBBIE" MAKES WAY FOR COLLEGE TRAINED MEN

Bobbies as automotive police.

A London Bobbie.

The traditional "bobbie" or "peeler", nicknamed affectionately after Sir Robert Peel, who founded the renowned London constabulary over a century ago, is slated to pass soon and the flow of Yorkshire country lads who go up to London to enter the force hopeful of rising to an inspectorship is ebbing. Lord Trenchard, police commissioner at Scotland Yard, has decided that new conditions demand new training methods and from now on candidates for the job of guarding London must go through a 27-month period of police theory, regular university course, and practical routine before entering the force.

Salmon Good At Fasting

Research Worker Has Discovered Many Facts About Fish

"Pity the poor salmon! It goes for months without a single bite to eat," said Miss Elizabeth Boyd, of the staff of the department of zoology at McGill University, who is interested in setting up a teaching zoological museum there.

"There need be, however, very little sympathy for the sea trout, a kin fish of the salmon," continues Miss Boyd; "it is just 'plain hog'. It eats on its way to fresh water spawning grounds, while the salmon never takes a mouthful."

Miss Boyd has recently had published in Scotland the results of her three summers' research there in the form of a report (a joint effort with another research worker), entitled "A Third Investigation of the Food of Sea Trout".

Miss Boyd's research on this subject was carried out during summer vacations from the University of Edmonton, where she obtained her B.Sc. degree, and from Mount Holyoke College, Massachusetts, where she obtained her master's degree a year ago. She joined the staff of McGill last fall.

The sales of branded beef in Canada for the month of May amounted to 4,286,360 lbs., as against 2,754,678 lbs. in May, 1933. The total sales for the first five months of this year were 17,163,703 as against 12,922,193 lbs. in the corresponding months of last year.

In Persia, foremen punch a card for the worker at the end of the day's work to show the wages due.

Blames Uncle Sam

U.S. Upset World Trade Relations States Illinois Speaker Of Congress

The Hon. Henry T. Rainey, of Illinois, Speaker of Congress, is not at all backward in blaming his own country for upsetting world trade relations.

Speaking in Toronto, Mr. Rainey frankly accused the United States of initiating the nationalistic trend and declared that reciprocal tariff provisions recently enacted were for the purpose of restoring a workable balance.

"The world is seething with nationalism," Mr. Rainey said, "and peace seems far away; no nation can really prosper until every other nation is prosperous; no nation can ever really be self-sufficient. . . . With supreme indifference we violated economic laws."

No one can deny the soundness of the Speaker's contention. The United States, more than any other nation, is responsible for extreme nationalism in matters of trade. This is why it is so proper and so necessary for the United States to take the lead in reversing the program that has had such disastrous results. There are indications that President Roosevelt is prepared to do this. In the efforts that he may make to this end he will have the hearty backing of every forward-looking business man and of every true friend of international harmony and co-operation.—Border Cities Star.

The earliest known manuscript of any part of the Bible is a papyrus from the early third century showing parts of Genesis.

BRITAIN SATISFIED—GERMANY HAPPY, OVER DEBT AGREEMENT

The agreement between Great Britain and Germany whereby British interests in Germany are protected during the Reich's six months' foreign obligations moratorium, is welcomed by both parties with satisfaction and unconcealed relief. At one time it looked very much as if lack of accord would start a trade war between the two countries. The main picture shows Germany's three financial experts: Dr. Blessing, Herr Ulrich and Dr. Berger, leaving the British Treasury in Whitehall during the debts default debate. Inset is the British Chancellor of the Exchequer, Neville Chamberlain, who was largely responsible for the satisfactory outcome of the conference.

Chief Migratory Bird Officer For The Prairie Provinces Has Been Appointed By Government

Old Custom Revived

Brittany Staged Bachelors' Fair Which Was Well Attended

Reviving a picturesque old custom which has not been observed in Brittany for half a century the municipal council of the little Finistere village of Moureu staged a bachelors' fair with joyous and highly successful results.

Invitations had been sent far and wide to all young men who were thinking of getting married but had not yet found a suitable mate, and the word was passed around among the unmarried girls of the entire region to be on hand with their best frock and smile.

It is claimed that in the past many happy marriages have grown out of these fairs, and, judging by the number of dates that were made before the party broke up, the revived bachelors fair is also to terminate at the altar for many of the participants.

Northern Missions

Says Indians And Eskimos Had Fairly Good Winter

Work of the Anglican missions is progressing smoothly in the Arctic and sub-Arctic while the Indians and Eskimos had a fairly good winter, Rt. Rev. A. L. Fleming, Toronto, bishop of the Arctic, stated on arrival after a 4,000-mile aeroplane inspection trip over his far-flung northern diocese.

Hopping off from Waterways on June 1, with Pilot Can Farrell, Canadian Airways Limited, the bishop flew down the Mackenzie river valley as far as Aklavik, stopping at missions en route. For a week he visited Eskimo settlements along the Arctic coast.

Wood For Fuel

In Spite Of Other Things It Is Very Widely Used

In spite of the preference for coal and other fuels for heating purposes, a large amount of wood is still so used. The quantity used in normal years in Canada is estimated by the Forest Service, Department of the Interior, at 913 million cubic feet, or 9,611,223 cords. Fuel wood formed about thirty per cent. of the total amount of wood cut in the Dominion for all purposes. During the past two or three years there has been a large increase in the amount of wood used for fuel.

Should Be Outlawed

The revolver is a weapon for which the average Canadian has no particular use, and the sooner it is outlawed altogether the safer it will be for merchants, bankers, and private individuals. The revolver is playing a part in far too many crimes these days yet few things are more rare than reports that such weapons have done any good.

Honourable Thomas G. Murphy, Minister of Interior, has announced that he has assigned Mr. J. Dewey Soper, ornithologist and explorer in the department to be Chief Migratory Bird Officer for the prairie provinces with headquarters at Winnipeg.

The minister explained that the prairie provinces of Canada were the most important hatching areas for waterfowl, particularly ducks, in North America. It is from the prairies of Canada that a great percentage of the wild ducks of this continent fly southward to the Gulf of Mexico, and eastward to the Atlantic coast in autumn. A more limited number reach the Pacific coast. Acting under the authority of the Migratory Birds Treaty between Canada and the United States, and laws enacted under the treaty by parliament and by congress, very many measures have been taken in an endeavor to conserve for the present and future the supply of waterfowl. Without the treaty and these measures based upon it, the sport of waterfowl shooting would undoubtedly have disappeared years ago.

Drought in the southern part of the prairie provinces has caused serious restriction of the prairie nesting grounds for wild ducks. Other causes of depletion have affected the breeding stock, such as disease, and, as well, there has almost certainly been overshooting of some kinds of these birds. The preservation of the sport of wildfowling is a worth-while endeavour because this splendid recreation induces hardihood and attracts people to the outdoors. Mr. Murphy himself, is a sportsman and a lover of wild life, and believes firmly in the most adequate protection for this great resource.

Mr. Soper is well known in ornithological circles because of his discovery of the nesting grounds of the Blue Goose on the Foxe Basin coast of Baffin Island. For the last two years he has been investigating wild life conditions in Wood Buffalo Park partly in northern Alberta, and partly in the Northwest Territories, and while there has made extensive studies of the waterfowl which breed in that section of the Dominion.

It will not only be in connection with migratory game birds that he will be occupied because there is an ever growing appreciation of the part played by song birds and other insectivorous birds in protecting forests and crops from insect pests, and there is not the slightest question that these feathered friends increase the enjoyment of life, particularly in rural Canada.

The minister stated that Mr. Soper's duties in the prairie provinces will be similar to those carried on by the migratory bird officers in other sections of the Dominion. He will co-operate with provincial game officials, the Royal Canadian Mounted Police, conservation organizations, and educational institutions. It will be his special duty to keep in close touch with the waterfowl situation in the important prairie nesting grounds, and to keep the department fully informed in this respect.

The Migratory Birds Treaty, administered in Canada by the Department of the Interior, has been described as one of the most forward conservation measures in the world. The birds of Canada, to a very large extent, migrate beyond our boundaries in winter, and it is only by legislation in concert with the United States that Canada can be assured of their protection while they are absent. The great multitudes of wild birds of this continent are preserved for the benefit of the people, not only for naturalists, farmers, and sportsmen, but also for those in every walk of life.

A Real Treasure

Wonderful Map Of Africa In Form Of Tapestry

One of the most valued enrichments of South Africa House, Trafalgar-square, was shown for the first time at a party at which guests included Prince George, Princess Alice, and the Earl of Athlone.

It takes the form of a tapestry map of Africa, wonderfully and most painstakingly carried out on the Morris looms at Merton Abbey from designs by Mr. MacDonald Gill. The donor is Sir Abe Bailey.—News of the World.

Intentions to plant potatoes in the Dominion, as published by the Bureau of Statistics, indicate an increase of 3 per cent. this year. The intended acreage this year is 560,100; the acreage in 1933 was 527,700.

AN HONEST DOG

In these days when we hear so mush about vicious dogs, dog taxes, etc., it is refreshing and encouraging to hear something about the faithfulness, intelligence and honesty of some dogs. One day last week, King, the popular springer spaniel of the Redcliff hotel, saw a leather wallet on the street. Figuring, no doubt, that it was worth something to somebody, he picked it up and carried it to the hotel, walked around behind the counter and drew the attention of the clerk to what he had found. The clerk took the wallet from the dog and on examination found it contained $24.00 in cash, some valuable papers and a bank book. Fortunately the name of the owner was on some of the papers and the clerk was able to turn the dog's find over to the owner, who lives a considerable distance north of town.

King likes his nip of beer, and what a time he could have had over the week-end, with his find. But he was honest as well as intelligent so he did the proper thing in order to get the wallet back to its owner.

Here and There

The Open Dominion championship match in the Dominion Marksmen Revolver competition was won recently by the Canadian Pacific Railway Ontario police team with a score of 1435 points out of a possible 1500. R. C. M. P., civic and provincial police also competed.

Plans for the musical festivals of Western Canada during the coming year with a tentative discussion of policies for the next two seasons, were featured at a meeting of delegates of Western Competition Festivals recently at the Palliser Hotel, Calgary.

John Jacob Astor and his bride have decided to extend their honeymoon tour to the Canadian Rockies and British Columbia. "We intend to stop over at Lake Louise," said the young millionaire, "and then move on to Vancouver, taking in the sights on the way."

Captain R. G. Latta, skipper of the liner Empress of Britain and commodore of the Canadian Pacific fleet, retired from active duty recently. He was succeeded on the bridge of the Britain by Captain R. N. Stuart, V.C., D.S.O., U.S.N.C., R.D., R.N.R. Captain Stuart was promoted to the post of commodore of the Canadian Pacific fleet.

Indicating the trend towards greater production and recovery of business, substantial increase in the second quarter of 1934 as compared with the corresponding period of 1933 is shown in the recently published production figures of Consolidated Mining and Smelting, one of world's greatest mining companies.

Driving a highly decorated locomotive into the Canadian Pacific Railway depot at the end of the Calgary-Edmonton run recently, A. N. Hobkirk, veteran engineer, completed 43 years of continuous service with the railway, most of it at the throttle of an engine. "I have always liked my work and I hate to quit", said Mr. Hobkirk.

Founded June 18, 1874, by George and Mathew Beatty and with agencies, warehouses, offices or depots across Canada, New Zealand, the United Kingdom and fifty other countries, the national and world-wide exporting house of Beatty Bros. manufacturers of washing machines and farm implements, celebrated its Diamond Jubilee at Fergus, Ont., last month.

John F. Sweeting, industrial commissioner of the Canadian Pacific Railway, states in an official publication of the railway that there is a decidedly firm tone of confidence in the West and increased activity in many industries, with the tourist business promising to be better at all resorts this year.

An increase of 877,900 lbs. in the Nova Scotia lobster catch during the month of May was instrumental in raising the landed values $332,468 over the same month in 1933, according to an announcement by the Department of Fisheries on June 26th.

POUND NOTICE

TOWN OF REDCLIFF

The Local Tax Arrears Consolidation Act 1934

The Council of the Town of Redcliff have by resolution declared that the above Act shall be applicable to the Town of Redcliff, and any person wishing to take advantage of the provisions of the above Act, should on or before the first day of August, 1934, apply to the Town in writing, (accompanied by the sum of one dollar, which will be applied on applicant's taxes in case the application is granted) to consolidate the arrears of taxes due on any piece of property, and such application will be dulyconsidered by Council

The Act only applies to cases where more than one year's taxes were in arrears as at the 1st of January, 1934 Full Particulars of the payment and discounts and other matters concerning the above Act can be obtained at the office of the Secretary -Treasurer.

To those who properly come under the provisions of this Act all proceedings under the Tax Recovery Act, 1929, for sale or otherwise, are suspended in respect to the properties involved, and while the consolidation agreement is in force.

Crested Wheat Grass

Demand For Seed From Western Canada Is Insistent

In spite of the fact that there is considerable wheat grass seed being produced in Western Canada, the supply is still far short of the demand. This is due in part to severe drought which has visited the prairie sections of Saskatchewan and Alberta during the last few years, since crested wheat grass has had its widest distribution in that area. These conditions have demonstrated its exceptional drought resistance and ability to produce in a dry climate, but while the plants were able to make substantial growth on available spring moisture and to produce heads, the supply of moisture was frequently insufficient to fill the seed. Demand for seed of the "Fairway" strain is most insistent. Seed distribution of this variety has been quite general so that although both ordinary crested wheat and the "Fairway" variety have grown in the semi-arid sections of the South, the latter has been more favourably situated with regard to moisture. Good seed crops have been obtained therefore of "Fairway" crested wheat grass and the seed has been sold at a considerable premium over ordinary seed. For these reasons it would appear that seed stocks produced in Western Canada will soon consist largely of the improved variety.

Abuse Of Public Men

Anyone Taking Office Must Be Prepared For Unkind Criticism

"Do not think of entering public life," Rt. Hon. Mackenzie King warned a group of recent university graduates in an address the other day, "unless you are prepared to let people say what they want to say and go your own way unheeding to what is being said."

In other words, in the view of the former prime minister, no one who has not a thick skin has any place in politics.

It is perhaps to be regretted, but it must be admitted that there is a great deal to what Mr. King says. Any person who goes in for public life must be prepared for a regular barrage of criticism, both fair and unfair, of slander and vituperation, and must be prepared to find that the public will remember chiefly his errors, forgetting his accomplishments. He must be prepared to face the slings and arrows of outrageous opponents and the ingratitude of the public. As a leader of a great party, Mr. King knows something of this, as does also Prime Minister Bennett. —Sault Ste. Marie Star.

Taking Insect Census

Agricultural Research Centre In England Undertakes Big Job

How many insects are there in the country? Nobody knows, but an attempt is now being made to find out. What is, in effect, an insect "population census" is being taken at Rothamsted Experimental Station, the famous agricultural research centre in England. During eleven months some 180,000 insects have been attracted to a "light trap", which operates nightly. Then they are counted, and the time of their arrival and, as far as possible, the reasons for their activity, have also been recorded. The results obtained so far suggest that the number of insects in the country is much greater than has previously been supposed, but there is no reason to fear that they are getting the upper hand in their struggle with man, as some imaginative writers have suggested is a possibility of the future. Indeed, it is part of Rothamsted's job to see that they don't.

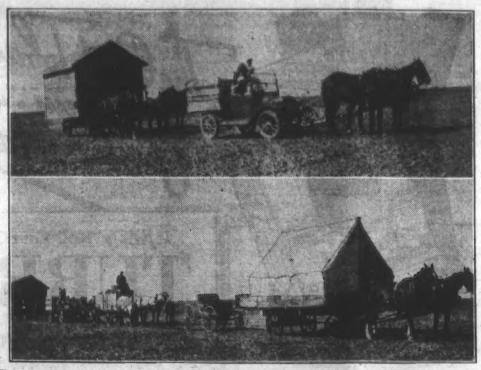
Money Merely A Token

No More Wealth In Itself Than Check Room Ticket

Money is not wealth. It is merely a token to represent wealth, says the Chamber of Commerce Journal of Old London. Money is no more itself wealth than a cloak-room ticket. Both are tokens or claims which, by a convention given the force of law, will be accepted on presentation without question. The distinction between them is that whereas a cloakroom ticket would only entitle the holder to receive a particular article, the money token will entitle him to a choice of articles offered for sale to a value written on the face of the token.

Canada, for the first time on record, moved up in 1933 to the first place as the principal supplier of goods to the Bahamas, British West Indies, in competition with the Old Country and the United States.

PRAIRIE FARMERS MIGRATE IN SEARCH OF BETTER LANDS



These two pictures, taken a few days ago, show farm settlers in the Creelman district in Saskatchewan, pulling up their stakes and trekking for newer lands around Kinistino. Heavy rains in the north encouraged the farmers to move and we see all kinds of conveyances being used to carry the people's belongings to their new homes. Note the motor car being driven by the old type of horse power, while immediately behind it is a house on wheels.

Old Footwear Was Quaint

Shoes Much Longer Than Foot Had Turned Up Points

Leather was first made by the ancient Egyptians and its lore reveals the quaint styles of foot-wear through the centuries. For example, the English Parliament in 1463 passed an act prohibiting shoes with pikes more than two inches in length, under penalties to maker and wearer, and those who would not comply were excommunicated. Even at a late period shoes were often twice the length of the foot. In 1090, in the reign of William Rufus, the great dandy Robert was called the "horned" because he wore shoes with long points, tufted, turned up, and twisted like horns. The shoes became fashionable, and the toes continued to increase in extent until in the time of Richard II. in 1390 they had attained such an enormous length as to be fastened to the garter by a chain of silver or gold. St. Crispin was a Christian martyr, born of a noble Roman family. About the middle of the third century, under the reign of Diocletian, he with his brother Crispianus fled from Rome into Gaul, where he worked as a shoemaker in the town which is now called Soissons. Here he distinguished himself by his exertions for the spread of Christianity. St. Crispin had a tender heart for the poor and needy and, according to one of the legends of him, "his benevolence was so great that he even stole leather to make shoes for the poor." From this legend charity done at the expense of others has ever since been called "Crispinaden".

Contains Wealth Of Knowledge

Scientists Learn Much From Bones In British Museum

Scientists have deduced many amazing facts from bones exhibited in the museum of the Royal College of Surgeons. Thus, the formation of the bone fragments of Saurians, a giant species of prehistoric lizard, is said to prove that these monsters suffered acutely from rheumatism. The vestigial hip bones of the sperm whale show that its ancestors roamed over the dry ground like wild beasts. And curious dents and holes in the skulls of Neolithic man afford conclusive evidence that our own prehistoric forefathers practised the art of trepanning, when their only instruments consisted of polished stones. This famous museum contains a wonderful collection of complete skeletons. The most extraordinary are those of Charles Byrne O'Brien, an eight-foot Irish giant, tiny Miss Caroline Crachami, who stood only one foot seven inches high, the favorite dog of Sir Edwin Landseer, famous animal painter, and a pure-bred racehorse, Orlando, a former Derby winner.

Something He Missed

A young lady and a young man travelling on an ocean liner became very well acquainted with each other. The young lady asked him if he had been through algebra.

The young man answered, "Yes, but I didn't see it. We went through in the night."

A motor race track is being constructed in Czechoslovakia of non-skid glass.

Candle-making apparatus was among the articles found buried in the ruins of Herculaneum.

Detecting Bogus Money

If Eyes In Portrait Seem Alive Bill Is Usually Genuine

When in doubt as to the genuineness of a piece of currency, look at the portrait or "vignette" and determine whether or not the eyes seem alive.

If they do not, it is probably a counterfeit bill.

This test was revealed at San Francisco by Captain Thomas B. Foster, head of the Secret Service Bureau.

"That is an easy test and practically infallible," Captain Foster said. "In counterfeit bills, the eyes of the portrait don't stand out—they seem to have a film over them that makes them look blind. The portrait on a genuine bill is clear and sparkling, particularly the eyes.

"This is due to the process used in making them—in nearly all counterfeit operations, a photo-mechanical process is used, making it impossible to give the printing the clear-cut sparkle of genuine engraved money."

Many counterfeit bills are not even the red and blue silk threads that marks real money, Captain Foster said.

Despite the federal government's war against it, counterfeiting has increased in the past ten years, he declared. There is now about $1.25 in counterfeit money to every $100,000 in genuine money in circulation. There is approximately an equal amount of counterfeiting in coins and bills.

Canning Rose Stocks

Air Tight Containers Keep Shipments In Perfect Condition

Canning roses is the latest industry in California. It is now possible for rose stocks cut in California to travel 3,500 miles across the American continent. They are put on sale in New York and other eastern cities in their original packings, and finally bloom in New Yorkers' gardens. The canning is done by spraying hot paraffin wax on delicate rose cuttings. After long experiments growers have learnt how to do this without destroying the living tissues. They are then packed mechanically in their air-tight containers.

Sunken Treasure

Englishmen Seek Wreck Of Old Galleon Sunk In Days Of The Spanish Main

Beckoned by the lure of sunken treasure, adventurous Englishmen are preparing to explore the bottom of Chauguaramas bay, Trinidad, for the wreck of an old galleon sunk in the days of the Spanish main.

Leader of the expedition is a young Briton, Frank Cooper, who will do the diving in the shark-infested water of the bay. He arrived at Port of Spain, Trinidad, after an unsuccessful search for treasure off lonely Cocos island, in the Pacific, and he has secured a three-year concession to the legendary gold aboard the Spanish ship.

Native tradition says the galleon was bound for Spain with a huge cargo of gold when Admiral Apocado ordered her scuttled to avoid capture by a pursuing British ship.

Since then many expeditions have sought vainly to find the sunken craft and loot its rich cargo. The last group of disappointed searchers left the bay two years ago.

Diver Loses Life

Attempted High Dive From Bridge On Columbia River

Roland McCall, 25, well known swimmer and diver of Vancouver, Wash., lost his life when he dived from a span of the interstate bridge to the Columbia river, 110 feet below.

McCall came to the surface of the river a moment after he had plunged into the stream, but his body sank within a few seconds. It was not immediately recovered.

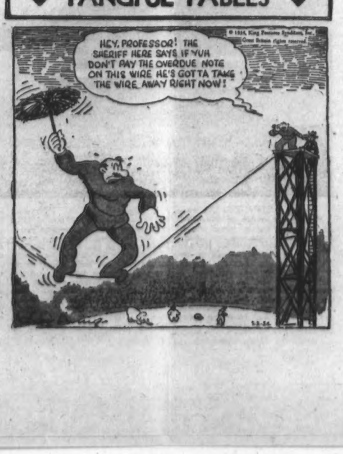
McCall's thrilling dive was a feature of the annual mid-Columbia regatta. He accomplished the feat from a slightly lower level last year.

What is called the oldest bird sanctuary in the world is located at Abbotsbury, Eng. It is inhabited by about a thousand swans.

Cactus plants are used to produce various drugs, soap cleaner, water softeners and a boiler compound.

Parrot fish stand upright while having their teeth "picked" by smaller fish.

FANCIFUL FABLES



Time To Cut Hay

If Clover Predominates Early Bloom Stage Is Best

As the season approaches for making hay it is well to remember that the feeding value of the hay will be determined very largely by the stage at which it is cut. This fact is emphasized by the experiments conducted on the Dominion Experimental Farms. Harvested at the right time and properly cured, a palatable and highly nutritious feed is assured, but if cutting is delayed until the seed is formed, there is a serious loss in digestibility and feeding value. In spite of the fact that hay in Eastern Canada represents a large proportion of the annual value of all field crops, the hay crop is neglected to a greater extent than any other.

Much of the hay crop consists of a mixture of clover and timothy. Since clover usually predominates in the first crop year, the hay should be cut when the clover is ready. This is in the early bloom stage. Early cutting of the clover promotes a better second growth and gives a better seed crop. In the second crop year, cutting should begin at the best stage for timothy. This is when the plants are fully headed and not later than full bloom. When timothy is harvested before blooming, there is sufficient digestible protein for cows producing eight to ten pounds of milk, whereas if the hay is not cut until the seed is formed it is barely good enough to supply a maintenance ration.—L. E. Kirk, Dominion Agrostologist.

The Art Of Conversation

Author Gives Some Helpful Ideas For Its Cultivation

"We talk, we chatter, we gabble, but we do not converse," declares Grenville Kleiser in his new book, "How To Improve Your Conversation."

He gives some helpful suggestions in regards to conversation and its cultivation. Thus these twelve:

Do not let your feelings and prejudices overcolor your opinions.

Remember that conversation should be a natural exchange of ideas, not a verbal or vocal contest.

Speak slowly and quietly.

Avoid controversial subjects.

Do not tell long stories.

Never give unsolicited advice.

Resist the desire to be prominent in conversation.

Be quick to correct in yourself such faults as loudness, high pitch, over-emphasis, ill-considered speech and loquacity.

Listen much.

Don't attempt to be "funny".

Don't speak of self unless you must.

Make your conversation worth while.

First Attempt Was Crude

Smoke Furnished Lifting Power For Balloon In 1783

Ascent of the first manned balloon was made by two Frenchmen, in the year 1783. Its lifting power was smoke, and in order to provide a continuous supply of smoke, a fire-basket was fastened beneath the balloon, and the airmen—Pilatre de Rozier and the Marquis d' Arlandes—furnished themselves with bundles of wood with which to replenish it.

"They also carried wet sponges to extinguish the flames when the gear caught fire," says Dorothy Flatt, "and, whilst one was occupied in heaping on fuel to prevent the balloon from dropping into the Seine, the other was busy putting out the flames on the burning fabric. In spite of these difficulties and dangers they succeeded in crossing over Paris, and returned to earth, the first aerial passengers since Daedalus to alight in safety."

Luscious Apricots

Seventy-Five Million Apricots To Be Grown In B.C. This Year

Seventy-five million luscious apricots, or about seven and half of these golden globes for every man, woman and child in Canada, will be picked this summer in the Okanagan Valley. It does seem that every time any variety of Okanagan fruit is discussed, the word "millions" creeps in. It must be the climate. Anyway 75,000,000 apricots are ripening rapidly. This number represents rather more than twice the crop of last year and also the biggest yield even the Okanagan has ever recorded. Using cold, commercial terms, the marketable crop was around 100 cars in 1933. This year it will be in excess of 200 cars. A car contains 1,000 crates, each holding six 4-pound baskets. To arrive at the 75,000,000, average the cots at 16 to the pound and there you are!—Country Life in B.C.

Housing Swarm Of Bees

Quite Easy If They Settle On Nearby Object

Buzz, and they are off. The excitement of the swarming bees is immediately transmitted to the beekeeper himself and all other persons who may be near. Where will they go and how will you get them is the invariable question asked by the onlooker, but the one asked by the beekeeper is what shall I do with them to save my crop. In some cases the swarm may definitely settle all questions by absconding immediately it leaves the hive, but usually it settles on some nearby object from which it may easily be retaken once the bees have all settled on the cluster. Should the swarm cluster on the branch of a tree or bush, that branch may be cut off and the swarm carried back to the apiary and the bees shaken down in front of the hive in which it is to be housed. If the swarm has settled on some immovable object, the hive must be carried to the swarm and placed in such a position that the bees can be shaken or brushed down as near to the entrance of the hive as possible. In the evening after all the bees have entered the hive, it should be returned to the apiary. Occasionally the swarm may cluster in some place from which it is practically impossible to take it. In such cases the swarm may be dislodged by turning a stream of water on it, or by any other convenient means in order to force the bees to cluster in a more accessible place. The hive in which the swarm is to be housed should be fitted with drawn combs or full sheets of foundation and if possible a frame of brood from some other colony. The Bee Division, Central Experimental Farm, Ottawa, has found that there is little or no reduction of the honey crop if the swarm is housed in a new hive on the old stand from which the swarm came. The parent colony is moved to one side, the new hive containing the swarm is set in its place and the honey supers from the parent colony are then placed over the swarm. The instinct of procreation has been satisfied and the bees will continue the work they left a few minutes previously just as though nothing had happened.—C. B. Gooderham, Dominion Apiarist.

Provinces To Reap Benefit

May Take Action To Recover Monies Won In Lotteries

Provincial treasuries will reap the benefit under a bill passed through parliament this session which did away with the "informer clauses" of the criminal code. Under the new law, provincial attorneys-general may take legal action to recover money won in lotteries, instead of the old law which gave any man or woman this right.

The act rends the money shall revert "to the crown" if action is taken against the winner of a lottery but this has been explained as referring to the provinces, who have legal jurisdiction under the British North America act.

Introduced by Hon. Hugh Guthrie, minister of justice, the bill passed the house and senate in record time because the common informer has had no friends on parliament hill since the law was invoked five or six years ago.

For the past two or three years, the informer law has been more or less a dead letter on the statute book.

Pace Of The World

Determined By Rate At Which Work Is Done

The real pace of the world at any time is determined by the rate at which the bulk of the world's work is being done. The tempo of passenger travel to-day is that of the railroad and not of the aeroplane. For that matter it is not passenger speed that determines the pace of economic life but freight speed. A man in New York can buy a cargo of copper in London in five minutes over the radio telephone, but the tramp steamer which brings the stuff up from Chile does not move much faster than it did thirty years ago.—New York Times.

Canada Receives Old Mace

The mace of the old Upper Canada parliament building, taken to the United States by American troops who burned Fort York on April 27, 1813, has come back to Canada. It was brought home July 2 aboard the U.S.S. Wilmington, which docked in Toronto harbor. Mayor W. J. Stewart welcomed Captain A. F. Nicklett and his crew.

Great Britain now has twice as many movie theatres as France.

WORLD HAPPENINGS BRIEFLY TOLD

Steel experts in Germany claim to have developed an alloy nearly as hard as diamonds for cutting tools.

To cope with a potato shortage the reich government has lifted import quota restrictions on potatoes from Holland, Belgium and Italy.

Sir Hubert Wilkins, British explorer, left Croydon by aeroplane for Singapore to join the Lincoln Ellsworth Antarctic expedition.

A new museum of antiquities has been opened at the ruins of Corinth, to house relics found in 40 years of excavation.

In the first four months of 1934 building plans in Johannesburg exceed the total value of plans for the whole of 1933 by $800,000.

The Prince of Wales received 360 war pilgrims from South Africa in the grounds of St. James' palace, the party being from a pilgrimage to the battlefields of France and Flanders.

A collection of 360 letters belonging to Napoleon Bonaparte, which were apparently abandoned when Napoleon fled from Moscow in 1812, were reported found in a box in a corner of the Kremlin.

Helen Boucher, French air woman, set a new world speed record for light planes weighing 13,500 pounds by covering a 1,000-kilometre course at an average speed of 254 kilometres per hour.

Marked recovery was noticeable in the amount of customs duties collected during the first five months of 1934 compared with the same period of 1933, the Dominion bureau of statistics reports.

Hon. G. Howard Ferguson, Canadian high commissioner to the United Kingdom, told a London audience the world looked more than ever toward Britain for leadership. Mr. Ferguson was speaking at the opening of an exhibition of Canadian products.

Has Ingenious Idea

Man In England Announces Use For Old Razor Blades

There is one man at least who has solved the question that torments hundreds of families—what to do with used razor blades.

Moreover, he is prepared to take other people's old razor blades and use them for the general good! He is Mr. M. J. Harvey, borough surveyor at Hythe, England.

Mr. Harvey has hit on the ingenious idea of using safety razor blades to keep down the weeds in the Royal Military canal.

An official of Mr. Harvey's department said that scores of them are strung on end to a long wire, which is weighted with lead.

A workman on each side of the canal then drags the contraption through the water and—good-by, weeds! The device has been found so effective that there is hardly a weed in the canal and the old method of cutting them from a barge has been dispensed with.

Library Is Popular

People In English Cotton Town Are Great Readers

Great Harwood, the cotton town near Blackburn, England, claims the distinction of being the best read town in the country.

Of its 12,787 inhabitants, more than 6,000 are registered readers of the local branch of the county library.

Membership has increased weekly since the library was opened about three years ago, and so great is the demand on its service that the question has arisen whether to increase the premises.

It is common to see a queue of borrowers waiting outside the library doors.

It is only a small wooden building and people have to take their turns in selecting the books they want.

During the last twelve months 100,000 books were issued.

In two years, records of Oregon state penitentiary show that out of 987 new prisoners 44 were college graduates, 263 had high school educations, 613 had common school educations, and only 23 were illiterate.

The estimated consumption of creamy butter in Canada for April 1934 was 15,742,476 pounds, showing an increase of 693,235 pounds, or 4.60 per cent., on April 1933.

Numbers of ducks and chickens were reported to have died last year in two localities in Middlesex county, Ontario, as a result of eating rose chafers.

A "Railroad Zeppelin"

Shows Speed On Trial Run From Berlin To Cologne

A record railroad run of 380 miles in four hours nineteen minutes—giving an average of more than 90 m.p.h. over the whole distance, including two stops—was achieved by a Diesel-engined "railroad Zep" on a trial run from Berlin to Cologne.

A maximum speed of more than 110 m.p.h. was attained.

It is intended next year to open a regular service between Berlin and Cologne, the schedule for the distance being four hours, as compared with seven hours taken by the fastest steam train.

A "railroad Zep" service to Hamburg has been in operation some months, the time for the 195-mile journey being two hours twenty minutes.

Boat Driven By Car

Idea Being Tried Out On Thames In England

A strange craft was seen undergoing trials on the Thames recently at Putney, England. It consisted of a large, flat-bottomed punt containing a four-seater motor car with a 12 h.p. engine, from which the punt derives its motive power.

Paddles are fixed to the rear wheels of the car, which are jacked up off the bottom of the punt, and these wheels, set revolving with the running of the car engine, cause the paddles to cleave the water. The motorist has only to drive his car on to the punt and couple up.

Fashions

By Ruth Rogers

403

NOTHING COULD BE LOVELIER FOR SUMMER AFTERNOONS FOR TOWN OR COUNTRY THAN THIS SMART SHEER COTTON PRINT

A poise gives emphasis to the cool flowered shoulders, so utterly feminine and smart. You'll like the square cut of the neckline. It's so cool and flattering. The panelled skirt is slenderizing. It will give you a lovely appearance.

Chiffon cotton voile print, that tubs so perfectly made the original model pictured. Finish the edge of the sleeve frills with picot (done professionally) or roll the edges, if you prefer.

Plain materials as tub pastel silks, linen, novelty cottons, etc., also lend themselves excellently to this model.

Other fascinating ideas are chiffon prints, striped or dotted lawn, eyelet batiste, etc.

Style No. 403 is designed for sizes 14, 16, 18 years, 36, 38 and 40 inches bust. Size 16 requires 3¼ yards of 39-inch material.

Price of pattern 20 cents in stamps or coin (coin preferred). Wrap coin carefully.

Religion And Science

Sir Charles Saunders Says One Is Complementary To The Other

The dispute between religion and science is "humbug" in the opinion of Sir Charles Saunders, former Dominion cerealist and discoverer of several varieties of wheat, including Marquis.

In his first address since he was knighted in the King's birthday honors list, Sir Charles at Toronto told the Loyal Knights of Ye Round Table, of which he is honorary knight: "There cannot be any conflict between religion and science. Religion theorizes about the deity and science studies his works.

Provided each keeps to its own work, they are complementary and supplementary to each other."

He added: "All this dispute between the church and science is humbug. There is no need for it unless the church says something it has no business to say, as in the case of Darwin, or science says something about God who has not yet been a subject for study by science."

Sir Charles was speaking before the annual dinner of the Knights.

To Increase Vision

Optical Device May Be Great Aid To The Near Blind

Announcement of what he termed the "microscope spectacle", an optical device to increase visual acuity by 250 per cent. and employing a "new principle" in optical science, magnifying the vision of the partially blind beyond that of any other known device, was made at Toronto by Dr. William Fienbloom, of New York, before the international congress of the American Optometric Association.

Dr. Feinbloom said he had been working for nine years on the problem of achieving this maximum magnification of vision for the near blind in a convenient form that could be worn like ordinary spectacles.

Public streets take up one-third of the area of Manhattan Island.

Recipes For This Week

(By Betty Barclay)

TURNIPS AND CARROTS

1 cup cold boiled carrots
1 cup cold boiled turnips
1 cup medium white sauce
1 teaspoon sugar
1 teaspoon lemon juice
Salt and pepper
Buttered toast

Cut the vegetables in cubes. Add the white sauce, sugar, and lemon juice. Season with salt and pepper. When thoroughly heated, serve on toast, garnished with parsley.

UNBAKED BROWNIES

2 squares unsweetened chocolate
1½ cups (one can) sweetened condensed milk
2 cups (½ pound) vanilla wafer crumbs
1 cup finely chopped walnut meats

Melt the chocolate in a double boiler. Add the sweetened condensed milk, stirring over boiling water five minutes until the mixture thickens. Add vanilla wafer crumbs and ½ cup finely-chopped nut meats. Butter a shallow pan and sprinkle with ¼ cup nut meats. Place chocolate mixture in pan and spread evenly using a knife dipped in hot water. Sprinkle the top with the remaining ¼ cup chopped nuts. Place in refrigerator several hours or overnight. To serve, cut in squares. Makes 18. (Graham crackers may be used in place of vanilla wafers).

Was Too Proficient

The resident secretary in a provincial town of one of the big insurance companies was entertaining his general manager one day and suggested a game of golf, which offer was accepted. It so happened that the secretary was in unusually good form and the game ended at the twelfth hole. The manager was rather annoyed at being so heartily beaten, and he inquired acidly as he picked his ball off the green, "Tell me, Mr. Blank, what do you do in addition to golf?"

Interesting Facts About Food

Small Eaters Usually Live Longer Than Hearty Ones

On an average, a woman eats one-fifth less than a man. People who eat highly-seasoned foods regularly are usually irritable. Those who never touch cruets are frequently lacking in "pep". Fish and fruit are gradually ousting beef. Mr. Bernard Shaw has said that in beef we get nourishment second-hand; the beast first enjoys the vitamins of the pasture. There's all the wealth of the sea in fish. Fruit eaters usually have sweet tempers and sunny dispositions—since their food is largely concentrated sunshine. If it were not for the age-old customs of feasting we should find two good meals a day ample sustenance. A normal man of fifty has in his life consumed 25 tons of food, and a hearty eater between 50 to 60 tons; but the former has the better expectation of life. As a nation, the Romans were the biggest eaters. They made gluttony a pastime. That was one cause of the collapse of the Roman Empire.

Invention Of French Doctor

Tiny Electric Pump Does Work Of Human Heart

A French doctor has invented what he terms an "Artificial Heart". This artificial heart is a tiny electric pump which can be held in the hollow of the hand. Its speed can be so regulated that it is possible in a transfusion operation to pump blood from the volunteer into the patient's veins at exactly the same rhythm as the patient's heart-beat. The "heart" automatically stops when a sufficient quantity of blood has been injected. It has even been suggested that it may be possible to drain a person's body completely in cases of serious disorders of the blood, keeping the heart in motion and at the same time refilling the veins with pure blood by means of the artificial heart.

Most of the manners in the automobile world are possessed by gasoline station attendants.

Little Journeys In Science

THE LIVING CELL

(By Gordon H. Guest, M.A.)

To Robert Hooke, an English botanist, goes the credit for the discovery of the cell. It was about the middle of the seventeenth century that this scientist, while examining a piece of cork under the newly discovered microscope, observed that it was made up of a number of alveoli to which he gave the name of "cells". Other scientists continued to study these cells but it was not until one hundred and fifty years later that Brown and Dujardin commenced to study the contents of these cells.

These scientists saw them as an agglomeration of very small bags, which were independent of each other and contained a substance which they called "protoplasm". Protoplasm possesses the property of changing the materials received from the blood stream, oxygen and food, into living matter. How this change is brought about is still a mystery. All that science knows is that water and bread, for example, contain the same atoms as the deadliest of poisons. Food causes the cells of living organisms to grow and increase in number, whereas poisons bring about their destruction.

When examined under the microscope the cells seem to consist of a lucius suspended in the protoplasm, the latter being a more or less viscous tronsluscent material. The whole cell is held together by a protective membrane which is similar to the protoplasm in nature. In certain organisms, however, we sometimes find that this membrane is missing and that the cell's are simply drops of liquid without any protective coating. In these cells are found traces of carbon, oxygen, nitrogen, hydrogen, sulphur, phosphorus, nickel, zinc, arsenic, iodine, even titanium, vanadium and molybdenum—perhaps gold. Because who can say with assurance what elements exactly enter into the construction of a living cell.

Science has discovered very little as yet about the nature of protoplasm, because no sooner does the men of science attempt to analyze it than it ceases to function. Examination of dead protoplasm gives no further clue to the phenomenon called life.

Scientists cannot agree on the number of cells of an adult human being. Some say a billion billions, others estimate it at only sixty billions.

Has Gone Air-Minded

Dawson Creek Building Landing Field For Big 'Planes

The little village of Dawson Creek, B.C., at the end of steel is building a permanent airport and establishing a landing field to accommodate the largest aeroplanes in keeping with the advance aviation has made in the north country. So air-minded have citizens become they have voted to move the curling rink, tennis court, basketball court and baseball diamond to provide a field large enough for a tri-motored aeroplane to land and take off.

In Canada there are three native species of elm—white, red, and rock. The red and the rock elm are confined to southern Ontario and Quebec. White elm, however, extends from Cape Breton to central Saskatchewan, south of the height of land which divides the Great Lakes from Hudson Bay.

WITH CANOE AND PADDLE ON CANADA'S WATERWAYS

CHANGE is the prime essence of a vacation and a canoe trip in Canada is one method by which the stress of daily life can be exchanged for a tranquil, carefree existence. It may be for a limited time only but its effects are felt all the year round. Jostling crowds, rumble of traffic, hot pavements and vitiated air have no place in the life of the canoeist.

A large number of interesting routes are outlined in "Canoe Trips in Canada," a booklet recently issued by the National Parks of Canada, Department of the Interior, Ottawa. Following the routes described therein one can drift lazily along or relive the strenuous days of the voyageur. There are cruises which lead for a hundred miles through canal, stream and lake with alternating civilization and lightly wooded country. There are long, smooth flowing rivers and placid lakes on which one can travel for days, and by contrast rushing streams which ever and again break into foaming rapids and thundering falls. There are adventurous trips through wilderness country along routes once followed by Indian and fur-trader, now almost forgotten so seldom are they travelled. Strange geological formations, wild life, good fishing, the charming and the picturesque await the advent of one's canoe on the numerous and varied water trails of Canada.

FALSE TEETH
Dr. WERNET'S POWDER
Sold the world over—Dr. Wernet's Powder—justly called "the perfect powder"—holds false plates firmer for hours longer. Leaves no sickening gummy paste—teeth fit as snugly yet comfortably they feel like natural ones. Prescribed by world's leading dentists—just sprinkle on. Inexpensive—any druggistore.

OCCASIONAL WIFE

By
EDNA ROBB WEBSTER

Author of "Joretta", "Lipstick Girl" Etc.

SYNOPSIS

Camilla, Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Guy Matson, his former roommate with whom he has quarrelled. After a party at an exclusive club, when the rest of the members of the party go to a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Camilla urges Peter to accept some of her earrings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Werth calls and persuades Peter to accept a loan of $1,000. Peter finishes his exhibit and asks Avis and Camilla for suggestions as to a name for it. Camilla suggests "Eager Youth," and Avis "Inspiration". Peter adopts the latter title and Camilla, heartsick goes to Peter's studio for quiet and to think. Peter and Avis follow later, and as the lights are turned on, see the statue has been shattered to pieces. Avis accuses Camilla of doing this, and Camilla, stunned by the disaster, and hurt and horrified by the accusation, faints.

At Camilla's suggestion, Peter enters his exhibit a statue he had sculptured especially for her as a wedding gift. They named it "Land of Home".

Camilla's advertising campaign was a success from the beginning, and it was arranged to have three broadcasts, in addition to newspaper advertising, Camilla to both write the Tiny Tots stories and to deliver them over the radio.

(Now Go On With The Story)

CHAPTER LII.

It was arranged that the author of the Tiny Tots and the broadcaster of their escapades would remain anonymous until her radio debut, when she would be introduced to the public by her sponsor, the president of the Wheatheart Cereal corporation. What the interested public did not know was that her identity was not even known to her client's employer, Alexander Hoyt. Though desirous of meeting this mysterious individual who had so turned the tide of his fortunes, Hoyt was not insistent, and resignedly agreed to wait with his public for an introduction.

In fact, the affair rather pleased his fancy, added a dash of spice to his prosaic routine, which had been somewhat depressing during the past year.

This rejuvenation of his business was like an elixer of life to him; it stimulated his imagination and ambition as they never had been in his experience. Like all things that are precious, he had almost to lose his business, his pride, his ambition, before he discovered how much he valued them. And as the day drew nearer when he would meet and introduce this mythical creator of the Tiny Tots to his fast-growing consuming public, he found himself almost as excited and expectant as a young man approaching his wedding day.

But before that event took place another important day added its quota of excitement to Camilla's series of startling events.

She had not seen Avis since the evening of the party at the studio, when the statue was destroyed. They had avoided each other by mutual consent, and neither had discussed the other with Peter, who was seeing both of them regularly.

He had gone to the Werth's to tea as Avis had arranged, played the part of the artistic artist to her emotional adviser with admirable charm and finesse. He discovered the possibility of no less than three pieces for the gardens, which were spacious and beautifully landscaped. The rose garden needed a fountain figure, the rock garden a droll woodsman and the English formal garden presented an idea for a symbolic group of the seasons, done in white marble.

Mrs. Werth was favorably impressed and remarked when he had gone, "So that's the fellow with whom Camilla Hoyt managed a secret marriage? I can begin to understand why Amelia Hoyt finally approved and accepted him. Charming boy, and I've no doubt he has talent. His quiet modesty is most becoming. Why don't you get interested in someone like that? A girl with your experience could do a lot for an ambitious man. I could thoroughly approve a son-in-law like that."

"Give me time, mother," Avis shrugged. "Men like Peter are not picked up at every tea dance and golf tournament. They are exclusive and secluded, toiling away in some attic or waiting tables in restaurants. If I flirted with a promising looking waiter, you would be perfectly horrified."

"Don't be ridiculous," her mother admonished. "As for giving you time, do you forget that you are twenty-four and haven't given me even the privilege of announcing an engagement."

"You needn't remind me of it. But the wisdom and experience of three or four extra years may be more profitable in the end than too much youth and beauty."

"You mean Peter Anson and Camilla?" her mother glanced up to ask quickly.

Avis exhaled cigarette smoke slowly and swung the foot of a crossed leg, nonchalantly. "Their marriage was destined to fail from the beginning. They are estranged, already, and never have lived together. I may as well be prepared to console him as anyone. I dare say that he is rather fond of me."

Mrs. Werth struggled with past-generation scruples which swayed precariously into the realm of modern conventions. "Well, I can't say that I approve of your generation's way of doing these things. I don't know more about your affairs than I do. I still maintain that this Peter is a man worth playing for with diligence. Perhaps this work which he plans to do for us will influence his favor."

"Why else would you suppose that I am so concerned about the garden?" Avis laughed with amusement.

"Twenty years ago," her mother reflected, "I should have been horrified to think of my daughter deliberately planning to take another woman's husband, even if that woman didn't want him. I'm not wholly converted to the idea yet, but if that is your way of doing things, I don't suppose my prejudices or anything else can stop you."

"Nothing is going to stop me," Avis declared with fervor, crushing out her cigarette in a tray with a silver stag ornament. She stood up abruptly and straightened the soft mesh folds of a brilliant orange sport suit that displayed her figure to advantage. Always, her clothes emphasized this most attractive feature of her person, whether she were dressed for evening, afternoon, or lounged in dishabille. She wore long, very fitted sleeves or no at all, and clinging materials for full draperies, svelte tailored models for sports and street. Small, untrimmed felt hats, or berets at a jaunty angle, covered her sleek dark hair, and she used a vivid make-up to the advantage of her plain but clear-cut features. Without being beautiful, she was a stunning woman. Having nothing else to occupy her time and thought, she had specialized in herself.

"I wish these next twenty-four hours were past," she observed impatiently. "I should like to know just how to arrange my plans. So much depends upon the Paris scholarship award. I really don't hope that Peter will have a chance to win, but it will be a tremendous satisfaction to have it all settled. Tomorrow is the day, and I suppose there is nothing to do except wait. I think I'll run out and see Cathie to pass the time. I hear that she is seen about with Terry much these days. Wouldn't it be funny if those two, after playing around with everyone both of them know, would settle down together?

"I think it would be a good thing for both of them," was Mrs. Werth's opinion. "Their experiences balance very well and their pasts would be no mysteries to each other."

"It sounds too placid to interest me, but Cathie hasn't a spark of imagination in her empty little head. All she needs is a man who can deposit the money to cash her checks, and I guess Terry always can do that unless his dad loses his fortune. By the way, mother, I need another thousand to cover some investments I made recently. Will you tell dad to credit me with another four or five thousand?"

To some people, life and extravagance are as simple as that; to others, existence and sustenance are one continual struggle. There are those who give and those who take, those who live life and those who accept it. Avis was one of the latter and always would be. Had she not been secure by her own rights of inheritance, she never would have dared set her heart on Peter Anson.

Rather than battle with the world for a living as Camilla was doing, she would have put love and illusion in the discard, even without a reluctant glance over her shoulder, and pursued a tangible fortune. Being already possessed of one, her idle fancy had settled upon a forbidden lover. What she would do with him when she got him, she was not quite sure; but Peter represented to Avis the unattainable, the goal of achievement which every man and woman has in some form or other.

Avis found Cathie unusually reticent about Terry. It was customary for her to talk volubly about her current "big moment", but she only observed casually when Avis mentioned her recent friendliness with Terry, "Of course, we're going around places together. Why shouldn't we? We always have, when we had no one else more important on our waiting list. Terry's a good sort, but as lazy as you are."

"Lazy?" Avis queried in astonishment. "Why, I'm busy every minute!"

"And how?" Cathie laughed. "But what I want to know is, how did the Anson straighten out the kinglet? Was it Camilla who broke the statue?"

"Who else could have?" Avis' question was an undebatable statement.

"Well, aren't you a little ashamed of yourself for driving her to such desperation over your flirtation with poor Peter?"

"It serves her right. She had no right to ruin his life by dragging him into that absurd marriage, and neither of them a dollar to their names. I could make Peter what he wants to be."

"Only by breaking him first—breaking his ideals about love and marriage. And I don't think you would have much left to work on, if you did that to Peter."

"And that from our most noted playgirl!" Avis exclaimed in mock surprise. "What has Terry been doing to you, anyway?"

"You'd be surprised!" she retorted. "No, darling, not at anything you did!" Avis saw a place to trade a straight left.

(To Be Continued)

Back To Nature

Believes Unemployed Should Leave Cities And Go On The Land

Canadians have been too premature in their attempt to urbanize a country, still at the beginning of its development, Rt. Rev. Robert J. Renison, D.D., rector of St. Paul's church, Toronto, told reporters as he sailed for England aboard the liner Asyania.

The real solution to the hunger of thousands of persons in this country, he believes, is to get back to nature and the soil.

Dr. Renison was born in Ireland and educated in Toronto. For 16 years he was a missionary in the Hudson Bay area. In 1926 he became dean of the cathedral in Vancouver, and later bishop of Athabaska for a one-year period.

Ancient Coal Tongs

An iron coal tongs, thought to be the one used 200 years ago by David Zeisberger, founder of Schoenbrunn—first white village in Ohio, near new Philadelphia—was found recently by Harry Cheer, pilot at a Schoenbrunn flying field, when workmen were grading the ground.

Always Grumbling

A farmer, who was in the habit of grumbling about most things, was heard to say that his potatoes were very big that year. "Well," said his neighbor, "I'm glad you are pleased with the size of your potatoes." "Yes," said the farmer, "but what shall I do without the small ones for the pigs?"

There are five quadrillion tons of air in the world.

Has Queer Occupation

Man In England Sells Bees' Stings For Rheumatism

Britain's queerest salesman is George Aloysius Storey. He peddles pain.

All spring and summer he wanders through the small villages and hamlets, carrying on his back a large black box which emits a loud buzzing.

The box contains bees, whose main duty is to sting his rheumatic clients. Sixpence a sting is the price charged, and he finds plenty of people willing to offer an arm or leg to a bad-tempered bee.

A reporter found Mr. Storey walking along a road between Swinford and Catthorpe, in Leicestershire. His box hummed rhythmically to his stride.

"The faith in bee-stings as a remedy for rheumatism and neuritis is unshaken among most of Britain's villagers," he said. "I have only to arrive in the smallest hamlet to find plenty of customers. I prepare a small place on the victim's arm or leg with antiseptic, and place the bee in a tiny wire cage on the spot. Then I tickle the bee with a straw till it becomes really angry, and stings in self-defence. Naturally, I have to keep renewing my stock of bees, and I get these from my brother-in-law, who has hives near Durham."

THE RHYMING OPTIMIST

By Aline Michaelis

THREE A.M.

The waning moon from filted cup
Spills nectar, rising now;
And rocking bird, by that white wine,
Is stirred like wind-tossed bough.

O, wild and strange his poignant notes
Which on the night embark,
A spray of liquid silver sound
To shine against the dark.

Far moon, so passionless, so cold,
How can your rays inspire
Such surging melodies of pain,
Such mounting love and fire?

The waning moon looks down where Earth
Whirls heedless, locked in sleep;
But her one worshipper sings still
Across the night, the deep.

Just A Fek Questions

Matter Of Paying War Debts Has Many Angles

Yes, Europe "hired the money, didn't they." But Americans, before asking Europe to pay up, should ask themselves whether they want Europe to pay. And before that they should ask themselves whether they are allowing their emotions or their good business sense to decide their answer. And before that they should ask themselves whether America needs more money, or whether it needs more work to offer its citizens; whether it needs more goods (payment in kind) or more chances to sell its already abundant goods. And before that they should ask themselves whether a debtor can be expected to buy more goods while he is paying up old debts.—Christian Science Monitor.

Africa Growing Reward Wheat

A few grains of Reward wheat taken some years ago to Southern Rhodesia by Lionel Cripps have developed under Rhodesian conditions into a crop containing a very high protein content. The fame of the new wheat is such that samples are wanted all over Africa, largely because of its rust-resisting quality. Moreover, Southern Rhodesia will now be able to grow all her own requirements instead of having to import foreign wheat for mixing.

Canada Benefits By World's Greatest Shipping Merger

Cunard White Star Limited Steeped In Romance Of The Sea

With the organization of Cunard White Star Limited, the Atlantic passenger fleets of the Cunard Line and White Star lines comprising 25 ships and the steamer of 27,000 tons which will be launched on the Clyde in September, are united under one management. But just as the identity of each line is preserved in the name itself, the traditions of the Lines whose collective experience in the handling of ships covers a period of 158 years will carry on.

This unique experience gained in the romantic days of sailing ships, broadened now into less romantic but more practical development of steel ship- and steam engines, has reached its culmination in the gradual but wonderful evolution of the huge, magnificent luxury liners carrying the house flags of the Cunard and White Star lines to-day.

Who can hear the names of the Mauretania, the Berengaria, the Aquitania, mentioned and fail to place them among the "immortals" of the Cunard Line, founded in 1840 by Samuel Cunard of Halifax and dedicated to the service of humanity and Canada at a time when one fail to respond to the appeal of the Olympic, the Majestic, the Britannic, White Star ships are so widely known on the seven seas?

For so long have the ports of the world welcomed Cunard and White Star ships; for so many millions of travellers have they provided a "sweetened taste of life afloat"; it is to be wondered at that these ships bear names to conjure with, and that their services have become a tradition for all that is best and most worthy.

The history of Canada is inseparably woven with the history of Cunard. It was due to the vision and courage of a Canadian, Samuel Cunard, that a regular mail and passenger service was made possible between Great Britain and Canada and that steamships supplanted sail on the Atlantic. It was his driving force and genius that built the S.S. Britannia and sent her off Bristol, on July 4th, 1840, bound for Halifax with the first consignment of Her Majesty's Royal Mail, and he guaranteed that thereafter mails and passengers would be conveyed regularly winter and summer by the steamships of his line. That this first epic voyage was completely successful was due to Samuel Cunard's organizing genius, for the tiny paddle-wheeler Britannia of but 1,150 gross tons made the voyage in thirteen and one-half days. And now, a t ninety-four years later, there is being built by the Cunard White Star Limited the largest and most magnificent ship in history; No. 534 of 73,000 tons and more than 1,000 feet long; a dream ship that even Samuel Cunard could never have imagined.

Trade has followed the house flags of Cunard and White Star, and Canadian wheat producers, farmers and manufacturers have found for their products a ready place in the markets of the world, aided in their quest by the shipping facilities provided so continuously, reliably and regularly by these companies.

The growth of Canada and the increasing influence of her people have been met by the continuously improved service given by both Cunard and White Star. Always pioneers, the ships built by these companies for the Canadian trade have invariably embodied the newest development in steamship construction and have provided the greatest possible degree of luxurious comfort, beauty, seaworthiness and steadiness, and as heretofore, Cunard White Star Limited will maintain frequent and regular sailings to England, Scotland, Ireland and Continental ports.

Canadians are fortunate in possessing the most beautiful seaway to Europe. A magnificent river journey from Montreal to the sea, which shortens the actual ocean voyage by days, has been a feature of Cunard and White Star publicity for many years and has become a tremendous service for Canada in making the greatness, wealth and beauty of this Dominion known to the world.

Canada's destiny as a great nation is evident, and the record of these companies' services indicate that Cunard White Star Limited will march forward with it, providing for Canada a transportation system that will meet every travel whim or need, and one that is worthy of the complete confidence which it enjoys today.

Proved His Identity

Dog Lost For Five Years Does Tricks For Master

The saying that "elephants never forget" seems to apply equally well to dogs at least as far as "Prince", owned by a man in Quincy, Mass., is concerned.

"Prince" disappeared from home five years ago. He returned the other day to the Nunally home, scratched on the door for admittance, and just to prove his identity beyond a doubt, performed a series of tricks which his master had taught him when a puppy.

A Sticky Story

Here's a sticky story from Liverpool: A 40-gallon barrel of treacle burst and flooded the roadway. Five lorries struck fast. Cyclists pedalled furiously and made no headway. Three pedestrians struggled onward leaving their shoes behind them, and an office-boy fell headlong. Crowds cheered as he staggered from his treacle bath.

Little Helps For This Week

"It is good for me that I have been afflicted, that I might learn Thy statutes." Psalm 119:71.

And yet these days of dreariness
Are sent us from above,
They do not come in anger
But in faithfulness and love;
They come to teach us lessons
Which bright ones could not yield,
And to leave us blest and thankful,
When their purpose is fulfilled.

Why should I rebel at the plough
of my Lord that maketh deep furrows on my soul. I know He is no idle husbandman. He prepareth a crop.—S. Rutherford.

Heed not distressing thoughts when they rise ever so strongly, even though they have entered your mind fear them not, but be still awhile and do not believe the power you feel they have over you, and they will fall all of a sudden. It is good for your spirit, and greatly to your advantage, to be much and variously exercised by the Lord. You do not know what He has already done, and what He is yet doing for you therein. —I. Pennington.

Tesla Tells Of Force Rays

Can Be Set Like A Wall Around A Nation's Borders

Nikola Tesla, the inventor, celebrating his 78th birthday anniversary, declared he has discovered force rays which can be set like a wall around a nation's borders to render it impenetrable to military attack.

He said he plans to place his inventions at the disposal of the Geneva conference in the interests of peace.

The new rays, he said, would be made of particles, probably dust of some sort, microscopically fine, driven electrically and projected in the form of vast curtains miles high and 100 miles each in length. The particles would travel with the unheard of velocities of 50,000,000 volts. Their effect would be one devastating, he claimed, 10,000 aeroplanes flying into one of these curtains, would be destroyed to the last machine. He drew a picture of force projecting plants set up every 200 miles along the border. Each would shoot rays 100 miles on either side. The dust beams would travel in straight lines.

What Scotsman Wastes

One Thing He Does Not Save On Is Water

What is the only thing that Scotsmen ever waste? According to Mr. Chorlton, president of the Institution of Mechanical Engineers, the answer is water! Figures of water consumption in the British Isles, which Mr. Chorlton quoted at a recent Public Works Congress, show that Dublaine, in Perthshire, uses, on an average, 130 gallons of water a day per head of population. This is "top score," but Irvine, in Ayrshire, using 91½ gallons, Bridge of Allan, 85½ gallons ,and Paisley 81 gallons all get through a great deal more water than London, where the Metropolitan Water Board's figure is just under 30 gallons per head. And there are places in England where only twelve and fifteen gallons are used.

At Creston, B.C., an air-cooled, electrically operated cold storage with a capacity for three carloads has been installed for the Co-operative Fruit Exchange of that town.

Newfoundland supplied the United States with $900,000 worth of blueberries in the last six years.

Perhaps the greatest personal tragedy is to be able to do a thing pretty well but not very well.
